

Hakuma

Premium drinks

Natural, vegan drinks with the goal of creating a better future for us all. But how? Fair trade is not enough for us yet, because for us sustainability means making the value chain as climate-neutral as possible and thus creating transparency. For us and for the generations after us.

The can that grows back

We start where our carbon footprint is the largest: Namely, in the packaging. Our CartoCans made from 70% renewable raw materials with a predominant share of cardboard are ideal for saving the climate many tons of CO₂.

Zero CO₂ Emissions

HAKUMA is certified climate neutral. This means that we compensate our emissions with the purchase of environmental certificates, which we cause and can not eliminate. With the purchase of our products you support environmental projects in the growing regions.
